		1000	1.20	15	27	39	43	46	41	31	16
		1500	2.70	15	27	39	43	46	41	31	16

Forward Flow - characteristic of supply or discharge fan systems.
Reverse Flow - typical of return or intake fan systems.

Pressure Drop Calculation for Specific Velocity

Actual Velocity (fpm) = $\frac{\text{CFM} \times 144}{[\text{Height (in.)} \times \text{Width (in.)}]}$

$$\text{Pressure Drop} = \left(\frac{\text{Actual Velocity}}{1500} \right)^2 \times \text{Catalog Pressure Drop @ 1500 fpm}$$

Standard Construction

22 gauge galvanized casings
24 gauge perforated baffles

Acoustic Fill encapsulated in polyethylene to eliminate erosion and absorption of gases

Optional Features

Stainless steel or aluminum construction

Computer program available, which provides attenuator performance at actual job conditions.

Rectangular Attenuators

Self-noise Power Levels

		Self-Noise Power Levels, dB re 10 ⁻¹² Watts Octave Band/Center Frequency (Hz)

Area Correction Factors - Listed self-noise power levels are for silencers with a face area of four (4) square feet. For silencers with different face areas, the following values must be added to those in the table.

Face area (sq. ft.)	0.5	1	2	4	6	8	16	32	64	128
PWL Correction Factors, dB	-9	-6	-3	0	2	3	6	9	12	15
